EDUCATION

University of Pennsylvania - Philadelphia, PA Expected Dec 2028
M.S. in Applied Economics and Data Science | Coursework: Econometrics, Computational Methods, Machine Learning, Asset Pricing
University of California, San Diego - La Jolla, CA Sep 2022 - Jun 2026
B.S. in Mathematics and Business Economics | GPA: 3.91 / 4.00 (Major GPA: 4.00 / 4.00)
Activities: Junior Analyst, Student Foundation Investment Committee (student-run alumni fund); Society of Quantitative Analysts
Berkshire School - Sheffield, MA Sep 2019 - Jun 2022

PROFESSIONAL EXPERIENCE

AVALOK CAPITAL LIMITED (*SFC-licensed asset manager*) - Hong Kong SAR

Summer Intern

Jun - Aug 2026

- Authored five initiation reports on A-share optical interconnect, semiconductor memory, and hog-farming companies, triangulating DCF, PEG, and comparables with sector-specific anchors (P/E and PEG for optical interconnect; EV/head and ROE for hog farming); incorporated policy catalysts and downside cases, with all reports circulated to the desk and two names added as positions.
- Translated macroeconomic and geopolitical catalysts - including a UK leadership transition, U.S.-Iran escalation, and related energy-price moves - into a sector-rotation thesis from gas-related exposure toward renewable energy; summarized catalysts, valuation support, implementation rationale, and key risks in a trade-idea memo for desk discussion.
- Shadowed end-to-end execution for the two positions linked to the coverage, including broker routing, entry timing, limit levels, and volatility-driven rebalancing; tracked daily exposure and P&L in the firm's internal portfolio system and prepared position updates for the investment team.

STEALTH VENTURES (*venture studio building with AI*) - Irvine, CA

Fall Analyst

Oct - Dec 2025

- Conducted thematic and company due diligence on emerging AI companies, assessing product differentiation, scalability, funding activity, and founder-market fit across generative AI, data infrastructure, and applied AI.
- Built a Python Monte Carlo risk model with 5,000 paths over a 24-month horizon, projecting ARR, cash, EBITDA, and working capital for a Series B AI company under base, credit-tightening, and funding-freeze scenarios; calculated probability of ruin, 5% VaR, expected shortfall, and ARR drawdown.

J.P. MORGAN - New York, NY

Fixed Income Summer Analyst, Sales & Trading

Jul - Sep 2025

- Contributed to the FICC desk's daily pre-open commentary across U.S. Treasuries, investment-grade credit, and bond ETFs, preparing slides and talking points used by senior sales-traders in client discussions; tracked CPI, payrolls, FOMC decisions, swap-spread moves, and changes in the 2s10s curve for the morning huddle.
- Constructed a \$1 million investment-grade model portfolio for a client mandate requiring a BBB- minimum rating, three-to-six-year target duration, 4% minimum yield, at least 30% in Treasuries and bond ETFs, and no high-yield exposure; screened Treasuries, IG corporates, and bond ETFs by YTM, effective duration, rating, issuer, maturity, and liquidity using FINRA, FRED, and public ETF disclosures.
- Optimized the allocation in Excel Solver to maximize yield subject to duration, credit, and liquidity constraints, producing a three-holding portfolio with a 4.2% yield and 5.3-year effective duration - a two-year Treasury note, an IG credit ETF, and an intermediate-Treasury ETF; conducted +/-100bp rate-shock analysis and wrote the final recommendation covering security selection, concentration risk, and mandate constraints.

HUATAI INTERNATIONAL FINANCIAL HOLDINGS - Shanghai, China

Quantitative Research Analyst Intern

Jun - Sep 2024

- Led a five-person team replicating a published sell-side CTA strategy on CSI 300 index futures in Python, using daily changes in long and short open interest among CFFEX's top 20 clearing members as a one-day positioning signal over Dec 2019-Nov 2024; owned the full codebase, reviewed teammates' data collection, and found that the published edge had materially decayed out of sample, generating a 1.6% annualized return, 0.23 Sharpe ratio, and 13.9% maximum drawdown versus the 11.9% return and 8.1% drawdown reported for 2010-2020.
- Independently constructed and backtested a second signal based on the CSI 300 options call/put volume ratio, taking long exposure when the ratio exceeded parity and short exposure when it fell below; the standalone strategy produced a 0.03 Sharpe ratio and 26.8% maximum drawdown, leading to the conclusion that the raw sentiment ratio was too noisy to trade directly, with both findings presented to the desk as research output.

SKILLS & ADDITIONAL INFORMATION

Technical: Python (pandas, NumPy, Monte Carlo simulation, backtesting), C, Excel Solver, Stata, Bloomberg, Wind, Choice
Markets: DCF/comps, fixed-income portfolio construction, duration/convexity, swap spreads, yield curves, index-futures positioning
Certifications: Bloomberg Market Concepts; Coding for Everyone: C and C++ Specialization, Coursera
Competitions: SIG Sustainable Investment Pitch; UIS Stock Pitch Competition
Languages: Mandarin (Native), English (Native), Latin (Reading Proficiency)
Interests: Basketball, tennis, hiking, running, travel photography, music, and volunteering
